SKILLBRIDGE

Turn digital skills into real opportunities.

A software-led pathway from learning to portfolio, mentorship, and work.

Founder: [Your Name] | Software Engineer / Product Builder

FIRST DRAFT • 2026

The problem: talent is everywhere, access is not

Motivated young people may still face barriers between learning and earning.

Fragmented learning

Courses are scattered across platforms; learners may not know what to study next.

Limited connectivity

Data costs, device access, and unreliable internet interrupt consistent learning.

No proof of skills

Learners may finish lessons without a portfolio, work experience, or employer links.

Result: potential remains underused, while employers struggle to identify entry-level talent.

Our solution: one guided pathway from learning to work

SkillBridge combines structured learning, practical projects, and opportunity matching.

1. Learn

Personalized pathways in web development, data, and digital work.

2. Build

Practical projects that become a shareable portfolio.

3. Get support

Mentor feedback, peer groups, and career-readiness guidance.

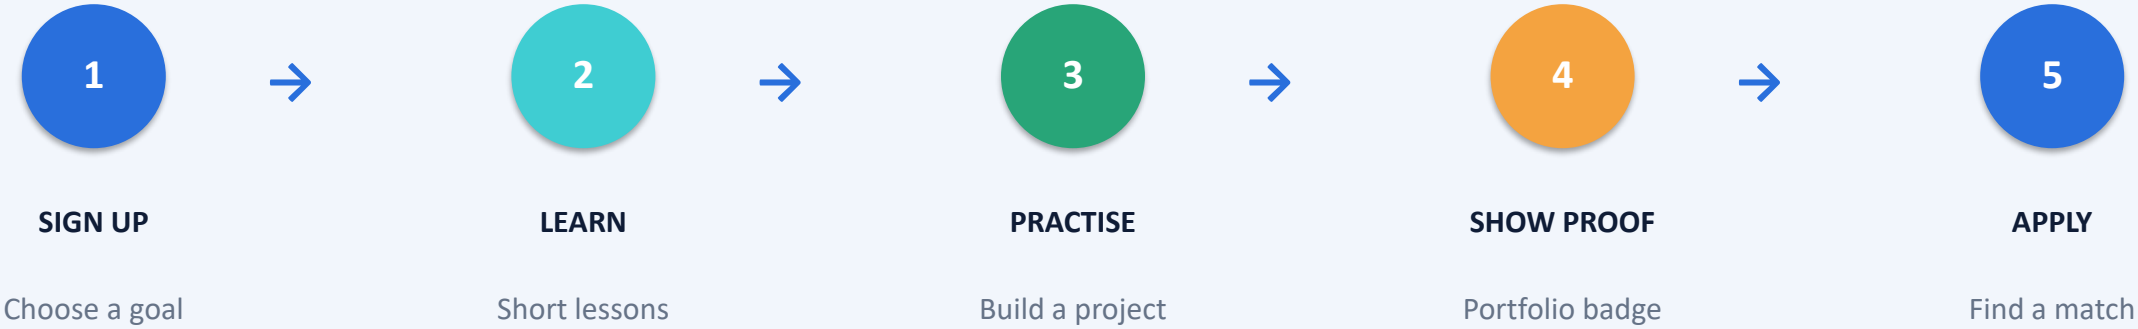

4. Connect

Internships, freelance tasks, and entry-level opportunities.

Design principle: mobile-first, low-bandwidth, practical by default.

The product: a simple learner journey

Start small, measure progress, and make the next step clear.

Learner dashboard

Progress, deadlines, projects, and next action.

Partner dashboard

Review portfolios, post opportunities, track outcomes.

Who we serve first

Pilot with a focused group before expanding to more communities and skills.

Primary users

Youth and early-career learners with limited access to digital career pathways.

Partner users

Community organizations, training centers, mentors, and youth programs.

Opportunity partners

SMEs, NGOs, social enterprises, and employers offering projects or entry-level roles.

Initial geography: pilot in Garissa County and nearby underserved communities; validate demand through interviews.

A sustainable model with learner access at the center

Keep core learning free or subsidized while partners support delivery and outcomes.

Institutional contracts

Organizations pay for cohort setup, learner support, reporting, and program delivery.

Employer services

Employers pay for curated talent pools, project challenges, or recruitment support.

Sponsored cohorts

CSR programs, donors, and foundations sponsor learners who need access most.

Revenue hypothesis—not validated. Pilot interviews will test willingness to pay and cost per learner.

Why SkillBridge is different

Connect the pieces instead of adding another library of courses.

Alternative	What it does well	Gap / our opportunity
Online courses	Strong content libraries	May lack local support and transition to work
Job boards	Show available roles	Often require experience and strong applications
Training programs	Structured cohorts	May lack ongoing portfolio and employer matching
SkillBridge	**Learn + build + mentor + connect**	**Low-bandwidth access and outcome measurement**

Technology: build lean, secure, and accessible

Ship a reliable minimum viable product (MVP) before adding complex features.

MVP application

Responsive web app / PWA, learner profiles, learning paths, project uploads, and progress tracking.

Practical architecture

Frontend: React or similar. Backend: Python/FastAPI or Node.js. Database: PostgreSQL. Managed cloud hosting.

Trust & resilience

Role-based access, encrypted transport, minimal data collection, backups, accessibility, and low-data pages.

Build sequence: prototype → test with learners → MVP → measure → improve. Stack choices are provisional.

Go-to-market: earn trust locally

Use existing community networks to recruit and support the first cohort.

Phase 1 — Listen

Interview 20–30 learners, 5–10 employers, and community partners; map barriers and priority skills.

Phase 2 — Pilot

Recruit 50 learners; run an 8–12 week cohort with mentors and project-based learning.

Phase 3 — Prove

Track completion, portfolio quality, interviews, internships, and learner feedback before scaling.

Channels: schools, youth groups, community centers, NGOs, alumni referrals, and social media.

Measure outcomes, not just sign-ups

Targets below are proposed pilot goals—not existing results.

50
learners enrolled

70%
course completion

35
portfolio projects

15
interviews / paid opportunities

Review monthly: access, engagement, completion, demonstrated skills, satisfaction, and opportunity conversion.

Team and 90-day roadmap

Start with a small, accountable team and add capacity as the pilot proves value.

Core roles

Product / software engineer
Learning & community lead
Mentor coordinator
Employer partnerships lead

Days 1–30

User interviews, clickable prototype, partner commitments, and privacy review.

Days 31–90

Build MVP, recruit cohort, launch pilot, gather feedback, publish first impact report.

Founder profile to add: software skills, projects, community experience, and collaborators.

Help us turn potential into opportunity.

We are seeking pilot partners, mentors, and seed support to validate and launch SkillBridge.

PARTNERS

Community organizations and training centers

MENTORS

Software professionals and career coaches

PILOT FUNDING

Connectivity, learner access, and delivery

Next step: agree on a 90-day pilot, define success measures, and review results together.
